

1. Remove duplicates based on Customer and Date (keep latest sale)

- Home → Remove Rows → Remove Duplicates
- Select Customer and Date
- Sort Date descending first to keep latest sale

2. Create a new column: Total Sales = Sales_Units × Unit_Price

- Add Column → Custom Column
- Name: Total Sales
- Formula: =[Sales_Units] * [Unit_Price]

3. Standardize Region names (remove extra spaces / fix casing)

- Select Region → Transform → Format → Trim
- Then Transform → Format → Capitalize Each Word

4. Replace missing values in Discount with 0

- Select Discount → Transform → Replace Values → Replace null with 0

5. Split Date into Year, Month, and Day

- Select Date → Add Column → Date → Year / Month / Day

6. Extract Month Name from Date

- Select Date → Add Column → Date → Month → Name of Month

7. Merge with Customer Master table

- Home → Merge Queries
- Match on Customer
- Use Left Join to keep all sales data

8. Create column: Sales After Discount

- Add Column → Custom Column
- =[Total Sales] * (1 - [Discount]/100)

9. Group data by Region and Category to get total sales

- Home → Group By
- Group by: Region, Category
- Operation: Sum on Total Sales

10. Add Index column starting from 1001

- Add Column → Index Column → From 1
- Edit Settings → Start from 1001

11. Classify sales as High / Medium / Low based on Total Sales

- Add Column → Conditional Column
- Example: If Total Sales > 10000 → High; Else if > 5000 → Medium; Else → Low

12. Calculate Profit Margin (Cost = 70% of Unit Price)

- Add Column → Custom Column → Cost = [Unit_Price] * 0.7
- Add another column → Profit Margin = [Total Sales] - ([Sales_Units]*[Cost])

13. Pivot data: Regions as rows, Categories as columns

- Select Region and Category → Transform → Pivot Column
- Values column: Total Sales → Operation: Sum

14. Unpivot to bring Category sales into a single column

- Select all columns except Region and Date → Transform → Unpivot Columns

15. Combine Product & Category into one column

- Add Column → Custom Column → =[Product] & " - " & [Category]
- Or Transform → Merge Columns with '-' separator

16. Calculate number of days since each sale

- Add Column → Date → Age → Select Date
- Transform → Duration → Days

17. Filter out transactions where Sales_Units < 10

- Filter dropdown on Sales_Units → Number Filters → Greater Than or Equal To → 10

18. Sort by Discount (descending) then by Sales Units

- Sort Discount descending
- Hold Shift → Sort Sales_Units descending

19. Identify Top 5 Customers by Total Sales

- Home → Group By → Customer, Sum Total Sales
- Sort descending by Total Sales
- Home → Keep Rows → Keep Top Rows → 5

20. Create a Year-to-Date (YTD) Sales column using only Power Query

1. Ensure Date is in Date type → Transform → Data Type → Date
2. Add Column → Date → Year → Year
3. Sort by Year (Ascending) and Date (Ascending)
4. Home → Group By → Group by Year → Operation: All Rows
5. Inside each group: Add Column → Index Column → From 1
6. Add Column → Custom Column → List.Sum(List.FirstN([Total Sales],[Index])) (Name: YTD Sales)
7. Close & Load to expand grouped tables
