

1. **Append:** Combine the Accounts Receivable data from Q1 and Q2 into one single table: All_AR_2024.
 2. **Merge:** Using the appended AR table, merge with Customer Details (from both Q1 and Q2) so each invoice has the customer's name and country. Handle missing customers appropriately.
 3. **Merge:** Then merge the combined AR + customer tables with Payment History to incorporate payment details for those invoices that have payments. Use join types to show invoices even if not yet paid.
-

Solution Steps in Power BI

(Power Query):

1. Load data

- Open Power BI Desktop.
- On *Home* → *Get Data* → *Excel*, select AR_2024_Q1.xlsx. Load both sheets: AccountsReceivable_Q1 and CustomerDetails.
- Similarly import AR_2024_Q2.xlsx sheets and PaymentHistory.xlsx.

2. Append AR Q1 & Q2

- In Power Query Editor:
- Select AccountsReceivable_Q1.
- On *Home* tab → *Append Queries* → *Append Queries as New*.
- In dialog: Primary table = AccountsReceivable_Q1, second table = AccountsReceivable_Q2.
- Name the new query All_AR_2024.
- Check the columns: since they are the same (InvoiceID, CustomerID, InvoiceDate, Amount, Currency), append should work cleanly.

3. Merge Customer Details

- Because CustomerDetails are split Q1 and Q2, either append those first or do two merges. One good way:
 - Append CustomerDetails and CustomerDetails_Q2 into a new query All_Customers.
- Then merge:
 - Select All_AR_2024 → *Merge Queries as New*.

- First table: All_AR_2024, second table: All_Customers.
- Join key: CustomerID in both tables.
- Choose join type: **Left Outer** (so all invoices are kept, even if customer detail missing).
- After merge, expand the new customer columns: CustomerName, Country.

4. Merge with PaymentHistory

- Using the merged AR + Customer query, merge with Payments table.
- *Merge Queries as New* again: First table = AR+Customer, second = Payments. Key = InvoiceID.
- Join type: If you want all invoices, even unpaid ones, pick **Left Outer**. If you only want paid, pick **Inner Join**.
- Expand payment columns: PaymentDate, PaidAmount, Method.
